

## **Introduction**

**Name:** Imoh Gerald Inangha

## **Region / constraints**

**Location:** Nigeria

Fair internet

No regulatory restrictions

Fair Power available

Lack Good Laptop

## **Hardware Purchase Plans**

CPU: 8 vCPU

RAM: 32 GB – 64 GB

Storage: 2 TB – 4 TB NVMe SSD

OS: Ubuntu Server 24.04 LTS / linux server

Bandwidth: MINIMUM 1 Gbps

Backups: Daily snapshots

Alerts: Telegram, Discord or LinkedIn

## **Expected Node Setup**

Damage Node Setup – Bitcoin Node Setup

## **Public Build Log**

I will maintain a public build log documenting every step of the deployment process, including:

- Server provisioning
- Operating system installation
- Package installation
- Node installation

- Configuration changes
- Synchronization progress
- Monitoring setup
- Troubleshooting
- Performance improvements
- Maintenance updates

The build log will be updated regularly throughout the program.

Repository:

I will publish every step publicly in my github repo - <https://github.com/vextor1/Damagebdd-node-setup>

### **Commitment to report progress**

I will publish progress updates at least twice per week. Any issues encountered and their resolutions will be documented publicly. Configuration changes and performance metrics will also be shared throughout the deployment.
